<b>Description</b>			
Hello guys,			
I've seen a strange error with validators and its error messages.			
When a domain validator and a property validator has been triggered at the same time, the output shows a third error which is basically located in <code>Tx_Extbase_Validation_PropertyError</code> :			
1242859509: Validation errors for property "title"			
The solution to hide this needless error was an if-condition in fluid-template, but this seems to be very dirty:			
<pre>&lt;f:form.errors for="myFormname"&gt;   &lt;f:for each="{error.errors}" as="errorDetail"&gt;     &lt;f:translate key="...{errorDetail.code}" default="...{errorDetail.message}" /&gt;&lt;br /&gt;   &lt;/f:for&gt; &lt;/f:form.errors&gt;</pre>			
<pre>&lt;f:form.errors&gt;   &lt;f:for each="{error.errors}" as="errorDetail"&gt;     &lt;f:if condition="{errorDetail.code} != 1242859509"&gt;       &lt;f:translate key="...{errorDetail.code}" default="...{errorDetail.message}" /&gt;&lt;br /&gt;     &lt;/f:if&gt;   &lt;/f:for&gt; &lt;/f:form.errors&gt;</pre>			
If you ask why there are two <code>&lt;f:form:errors /&gt;</code> : This is because property error messages and domain error messages must have an seperatly output.			
Maybe I'm wrong and there exists a very much more elegant solution, but if not, then it seems to be an error that the default error 1242859509 gets displayed.			
Kind Regards
