Description

When I de-select the checkbox "Deactivate t3editor" which is shown below the Info/Modify form of SETUP (or CONSTANT), there is no way of getting it back "active". If I unselect that checkbox again and SAVE, it is again activated as soon as I enter that form again.

This happens on 4.4 and current trunk. Would be cool to have that fixed for the 4.5.0 final release.

still valid?

i can't reproduce in current trunk.

This is how i do it:

- open up the setup > t3editor is activated (which it is by default)
- check the "Deactivate t3editor" > t3editor is deactivated immediately (plain textarea)
- hit the save button
- leave the template module
- go back to the template > t3editor is still deactivated
- un-check the checkbox > t3editor appears
- hit the save button
- leave the template module
- go back to the template > t3editor is still activated as expected
