History

It's not good practice to use variables that are already used by other extensions or could potentially be easily confused. This is explained in the Scheduler's manual, please refer to the chapter called "Naming of additional fields".

In this case, all form field names should be of the form:

```
tx_scheduler[linkvalidator][foo]
```

In additional field providers code the values would then be in:

```
$submittedData['linkvalidator']['foo']
```

Please consider this change to be very important.
