<b>Target version:</b>	
<b>Description</b>	
<p>Every time when adding new FAQ entries, you have to select the folder that holds the FAQ categories (which is often the same folder as the FAQ itself) and then select the FAQ category.</p> <p>So it would be nice if all available FAQ categories, depending on the General Record Storage Page or something like that, are actually shown right away, so instead of "group" in TCA it should be a "select" with the available categories.</p> <hr/> <p>I wrote a patch for it. Maybe you like it, Ingo, and will add it to the extension.</p> <hr/> <p>Other possibility could be - like in tt_news - to have a install-time-option with "Use general record storage when choosing categories" - otherwise all categories from the whole pagetree are shown.</p>
