Description

Quote from old mail on core list:

Rene, may you please take care of the bug below?

The element browser does not work correctly when trying the following steps:

- Open the element browser, you'll first see the "External URL" tab
- Change to the "File" tab
- Select a folder

=> You will get back to the "External URL" tab

Robert and I discovered this during his TemplaVoila seminar today, and we both agreed that this bug must have been caused by your changes in the element browser... :-)

See screenshot for more details.
