

## TYPO3 Core - Feature #16075

### render\_uploads should be more flexible

<b>Description</b> 1. at the moment the function render_uploads uses hardcoded table wraps. 2. Paramaters are passed via linkProc which should be replaced by a more generic stdWrap construct/render object.  A useDescriptionInsteadofFilename flag would also be nice but might be obvious when stdWrap is properly implemented.  (issue imported from #M3310)

#### History

##### #1 - 2006-04-21 16:47 - Ernesto Baschny

This has been requested before, in bug [#2421](#). I agree that we should make content rendering much more flexible and configurable through TS, especially in the css\_styled\_content extension (but maybe even in the core, so that wouldn't even need to use USER-functions for render\_bullets et al)

##### #2 - 2006-04-21 16:48 - Ernesto Baschny

Is duplicate of bug [#2421](#).
