Description

In Internet Explorer 7, the height of the fullscreen RTE is only about 10 lines. No problem with IE6 or FF. Version of rtehtmlarea is 1.4.2 on Typo3 4.0.2..

(issue imported from #M4486)

History

#1 - 2006-11-28 22:20 - Pim Broens

I have looked into it for a second. The problem is that IE7 no longer uses the style="height:100%;" value for the <textarea>. It ignores it and uses the default height.

(In the file /t3lib/class.tx_rtehtmlarea_base.php on Line 597 it could be changed into a height using pixels. The only problem then is the fixed height)

#2 - 2007-01-09 15:09 - Martin Kutschker

Argh, on my installations it's not 10 lines but 1 pixel. I see no RTE at all !!!

I've seen tips to use "height:auto" or "min-height:100%", but neither works for the RTE.

#3 - 2007-01-09 15:42 - Martin Kutschker

Solution: add "html { height: 100% }"

#4 - 2007-02-01 13:51 - Rickard Andersson

I can confirm that Martin Kutschker's tip works. I added the line to sysext\t3skin\stylesheets\stylesheet_post.css and now full screen htmlarea works in IE7. This fix should definitely be incorporated into the next bugfix release.

#5 - 2007-02-01 17:34 - Peter Faymonville

I can also confirm this fix. This should really be in the next release.

#6 - 2007-02-02 00:22 - Martin Kutschker

Rejoice! The fix has been added to SVN (both 4.1 and 4.0.4).
