

TYPO3 Core - Feature #16935

Add an option to add alternative external URL or shortcut for other languages

2007-02-02 13:54 - Sara no-lastname-given

Description	
There is no way to add a corresponding external URL or shortcut in another language when using the one tree model and choosing page type: external URL or shortcut.	
There is no facility to create an alternative external URL or shortcut on the default page or in the alternative language record.	
TYPO3 only allows one URL and shortcut in the default language.	
Also deviders2tabs is not enabled in translated pages (issue imported from #M4911)

#1 - 2007-02-05 14:02 - Benni Mack

Hey, actually, that's what I thought too, but I found this one in version 4.0.4:

- Click on "page properties" and select "external URL" for the page you want an external URL to be redirected.
- Click on "Web => List" and on the selected page then you'll see the "Alternative Page Language". Edit the translation you want a different redirect to and you should see at the bottom of this form a "URL" field where you can enter a language-specific different external URL.

If you can confirm this, I'll close this issue.

#2 - 2007-02-06 11:50 - Sara no-lastname-given

This must be included in the 4.0.4 version as it isn't in 4.0.2. Upgrading must be the answer then! Thank you for the information.

#3 - 2007-02-07 16:51 - Benni Mack

So, can you tell me if this problem is solved with 4.0.4 or 4.1 ? I'll close this issue then.

#4 - 2007-02-15 19:02 - Sara no-lastname-given

Sorry, haven't upgraded yet. I hope to do this next week. I'll let you know as soon as I do.

Thanks for your patience!

#5 - 2007-02-21 16:51 - Sara no-lastname-given

There is no option to add an external URL for an alternative language using 4.0.4.

#6 - 2007-04-08 16:49 - Benni Mack

Ha, I found out that I have this extension installed "altern_lang_page_link" which takes care of that! I included a screenshot to see that is done that way then.

#7 - 2007-06-11 13:25 - Mathias Bolt Lesniak

altern_lang_page_link doesn't work well in T3 4.x, so a core solution for this in T3 would be very good.

#8 - 2007-07-18 13:54 - Sara no-lastname-given

Its breaks my php-based menu extension so is unusable for me.

#9 - 2007-07-18 13:56 - Benni Mack

Can you specify how it "breaks" other extensions (which extensions) ?

#10 - 2007-07-18 14:06 - Sara no-lastname-given

I have a custom written php based extension to create a horizontal pull-down menu.

When I load the `altern_lang_page_link` extension my menu complete disappears.

I cannot post the code for the custom extension publicly as it is the IP of the company I work for but I am willing to send it to an individual if it will help solve this issue.

#11 - 2007-07-18 14:10 - Benni Mack

hey.

just shoot me an email about the custom problem (`mack -- at -- xnos -- dot -- o.r.g`).

But of course we need a long-term solution for this. maybe we can integrate the functionality of this extension in Core for 4.2 or 4.3 since it's clearly a missing feature!

#12 - 2007-11-19 23:06 - Benni Mack

I just wrote a patch that does exactly the same as the extension

http://typo3.org/extensions/repository/view/altern_lang_page_link/1.0.1/

This patch is still untested though.

#13 - 2008-01-28 18:02 - Mathias Uhl

it isnt fixed yet ...

#14 - 2008-01-28 18:04 - Benni Mack

what do you mean? Is the patch not working for you? Could you please be more descriptive?

Thanks!

#15 - 2008-02-07 17:17 - Mathias Uhl

the fix work with an external link but internal pagelinks are not possible right ?

#16 - 2008-02-10 23:21 - Ingo Renner

set to feature and removed from roadmap for 4.2 as it seems that a solution in form of an extension exists. nevertheless it should be considered to add this to the core.

#17 - 2008-02-12 10:38 - Benni Mack

Yep, Masi suggested on the list to finally solve a complete bug with the languages as well:

It's the same for all other fields :- (`page_language_overlay` should

inherit the type from it's parent record.

Is this possible somehow with some TCA magic? Meaning when loading the `page_language_overlay` in the TCEforms to automatically get some parent data to be used in the overlay as well (at least for displaying / using, not changing)

In theory yes, but it's simply not implemented.

There is the TCA-ctrl property `transOrigPointerTable`, which is used by `page_language_overlay`. And in `t3lib_TCEforms->registerDefaultLanguageData()` the original page record is loaded into `$t3lib_TCEforms->defaultLanguageData`.

Maybe `getRTypeNum()` can be changed as such that it tests for `TCA[<table>][ctrl]transOrigPointerTable` and if set uses the TCA of that table to determine the type (using of course

`$t3lib_TCEforms->defaultLanguageData` instead of the supplied `$row` parameter).

#18 - 2008-02-12 10:38 - Benni Mack

So, I think we need to solve this issue at the root and then submit a nice improvement patch for 4.3. I'll put it on my 4.3 list.

#19 - 2008-05-29 00:18 - Maxime Lafontaine

Is the patch working for Typo3 4.1.2? The extension include doesn't work with it (realurl doesn't show the right link, for ANY link).

thanks

#20 - 2009-02-02 17:20 - Ingo Renner

changed bug to also include shortcuts

#21 - 2009-02-02 17:29 - Ingo Renner

here's a patch that

- adds translatable shortcut options
- adds translatable external url options
- adds tabs to the translated pages
- introduces doktypes for translated pages

#22 - 2009-02-04 10:57 - Ingo Renner

committed to trunk (4.3)

#23 - 2009-05-07 18:30 - Ralf Merz

I've tried to use the patch-file v4 for TYPO3 v4.2.6

It didn't work, so I did the patch by hand. Here's a patch file for TYPO3 v4.2.6 (4911_translation_shortcut_url__v5_for_v4.2.6.diff).
