

TYPO3 Core - Feature #17434

Allow more than one parent field pointing to the same children table with foreign_field

2007-07-04 14:23 - Oliver Hader

Description

The following field configuration of a parent record in TCE is currently not possible:

```
'columns' => array(
'firstchildren' => array(
'config' => array(
'type' => 'inline',
'foreign_table' => 'tx_myext_child',
'foreign_field' => 'parent',
),
),
'secondchildren' => array(
'config' => array(
'type' => 'inline',
'foreign_table' => 'tx_myext_child',
'foreign_field' => 'parent',
),
),
),
```

The reason is, that with foreign_field the children are selected by the table and the uid in the field 'parent'. Thus, the children are not identified to with *field* in the parent record they belong.

The feature request is to have a new TCA property like 'foreign_fieldfield' that defines a field on the child side storing the fieldname of the parent record creating the child.

The attached extension "test_required" reproduces this behaviour.

(issue imported from #M5897)

+1!

This behaviour limits the reusability of child tables drastically.

If someone points me in the right direction I would be willing to fix this, can't be that hard.

#2 - 2008-02-25 15:21 - Ingmar Schlecht

I don't see the point.

Why do you use
'foreign_field' => 'parent',
for both of the fields?

I would propose to use
'foreign_field' => 'parent',
for the first field,

and use
'foreign_field' => 'daddy',

for the second field.

Of course, the child table would have to contain both fields "parent" and "daddy", but what's the problem? If that doesn't work - well, that's a bug. But conceptionally, I don't see why it should be possible to link to the same child table using the same parent pointer field twice!

Ingmar

In my opinion this is a duplicate of: <http://bugs.typo3.org/view.php?id=7063>

Hi,

as this issue is very old. Is this feature missing in newer versions of TYPO3 CMS (6.1)?
