Description

We notice BE session timeouts. The timeouts occur after some time of inactivity (1-2 hours), that is shorter than the time defined in \$TYPO3_CONF_VARS["BE"]["sessionTimeout"]

Some debugging showed that t3lib_userAuth::gc() is called with different values of gc_time. gc_time (and auth_timeout_field) sometimes have the value \$TYPO3_CONF_VARS["BE"]["sessionTimeout"] and sometimes are 6000.

Probably there are t3lib_beUserAuth-Objects initialized (by extensions or cli-programs) that do not explicitly set auth_timeout as in init.php. We are using simulatebe, which I suspect being the problem.

Changing auth_timeout_field from 6000 to the value of \$TYPO3_CONF_VARS["BE"]["sessionTimeout"] in t3lib/class.t3lib_beuserauth.php seems to fix the problem.

History

#1 - 2009-12-06 23:14 - Kurt Gusbeth

[BE][sessionTimeout] = 3600
Windows 7
Internet Explorer 8
Typo3 4.3.0
Working with tabs (Strg + T).

The "Typo3 login expiration notice" appears not after one hour, it appears after a few minutes! This is a very annoying bug. The "Stay logged in!" button doesn't work! If I click at it, the window "Typo3 login expiration notice" appear again. The "Refresh Login to TYPO3" occurs too fast. I can approve this only when I am working with tabs.

#2 - 2009-12-11 01:01 - Christian Kuhn

Probably related to [#21511](#)

#3 - 2010-05-11 16:45 - Chris topher

Kurt's problem might be a duplicate of [#21511](#).

But the original report here surely is not (already because it was reported before IE8 was available).

#4 - 2010-07-21 11:22 - Kurt Gusbeth

Note to my report (0033499):
This problem is still not fixed in Typo3 4.4.0.
I have the same problem with:
- Windows XP
- Chrome browser 5.0

- Typo3 4.4.0

The "Typo3 login expiration notice" appears when I am coming back to the backend from an other browser-tab.

#5 - 2011-03-16 10:28 - Rafal Likus

We have the same effect:

Windows XP/7

IE 8, Firefox 3.6.x

Typo3 4.4.2 and 4.4.4 PHP5.3 with wincache, memcached, IIS 6/7

Mostly on workstations of users without power user / administrator privileges in Windows.

With these effects too <http://bugs.typo3.org/view.php?id=14979>

- *Target version deleted (0)*

Is this issue still valid since the bootstrapping was unified?
