Description

Currently there is no stdWrap for wrapItemAndSub. This would be very nice to use .insertData = 1.

Currently you need this code to get it working:

```
allWrap = <li class="{field:title}">|
```

```
allWrap.insertData = 1
```

```
wrapItemAndSub = |</li>
```

which is far too much, not nice and shouldn't be the way to do it

(issue imported from #M6991)

I accidently attached "tca" tag, and now cannot delete it...

#2 - 2007-12-21 19:17 - Bernhard Kraft

i thought about the possibility giving "each" TS property stdWrap properties :)

do not ask currently how i am going to achieve that ... but i will surely find a solution :)
