

TYPO3 Core - Bug #18309

Change elderly while(list()==each()) to foreach calls in t3lib_tstemplate

2008-02-26 09:02 - Franz Holzinger

| Description | |
| In some PHP5 versions the explode functions does not reset the array. A following while, list and each combination will not do anything. | |
| class.t3lib_tstemplate.php | |
| <pre>if (strstr(\$all, '{\$'}) { \$findConst = explode('{\$', \$all); \$theConstList=Array(); next(\$findConst); while(list(\$constVal)=each(\$findConst)) {</pre> | |
| So replace this by a foreach instead of the while or insert the reset (\$findConst); | |
| (issue imported from #M7669) | |

History

#1 - 2008-04-08 15:22 - Franz Holzinger

Bug is still present in TYPO3 4.2 RC1:

class.t3lib_fe.php line 3229

```
$headerArray = explode('|', $this->config['config']['additionalHeaders']);
while(list($headLine)=each($headerArray)) {
```

No reset of the array has been done here.

Hey Franz seems to be unrelated to this issue (different file). right?

#3 - 2008-07-25 15:07 - Franz Holzinger

Yes, there are probably many PHP files which could not work under some PHP version.
I have a serious problem with t3lib_div::trimExplode:

See t3lib_div:

Unfortunately t3lib_div::trimExplode does not make a reset any more in TYPO3 4.2.1. This is bad, because a following list(..) -while will not be executed. The PHP explode does a reset.
