Description	
Imagine the following structure of deleted pages: <ul style="list-style-type: none">• "First Level" (id: 1, deleted: 1)<ul style="list-style-type: none">◦ "Second Level" (id: 2, deleted: 1)<ul style="list-style-type: none">▪ "Third Level" (id: 3, deleted: 1)	
If the "Third Level" (id: 3) shall be recovered, it would be required that all deleted ancestors get recovered as well.	
On a per-user basis it shall be possible to define the following: <ol style="list-style-type: none">1. User is allowed to execute recursive recovering data structures (in the example, if page with id 3 gets recovered, also the ids 2 and 1 get recovered automatically)2. User is not allowed to execute recursive recovering - thus, the record (e.g. page with id 3) isn't displayed with the possibility to be recovered in the recycler	
"Per-user basis" means User Tconfig and User setup module. Additionally there must be a configurable system default to that behaviour.

[FEATURE] Recover deleted pages recursively to top of rootline

If enabled for an user or being an admin, deleted pages above the selected item are also recovered. If an user does not have this ability, the recover button is locked.
