Description

Hi there,

I'm working with the final version of TYPO3 4.2 and I have a field in one of my own extension with a `internal_type` "file" for an image or another file:

```
"pdf" => Array (
"exclude" => 1,
"label" => "LLL:EXT:my_lawyer_management/locallang_db.xml:tx_mylawyermanagement_issues.pdf",
"config" => Array (
"type" => "group",
"internal_type" => "file",
"allowed" => "",
"disallowed" => "php,php3",
"max_size" => 50000,
"uploadfolder" => "uploads/tx_mylawyermanagement",
"size" => 1,
"minitems" => 0,
"maxitems" => 1,
)
),
```

I can use it in the standard language smoothly. But when I translate it, the whole server-path is inserted in the input-field for the file and so I got a warning and the error-message "1: Could not delete file" by saving, because of the double server-path - after that it's all okay - but it's irritating for the editor.

Is it a bug or a missing configuration?

Thanx,
Lee

History

#1 - 2008-10-31 18:16 - Maxime Lafontaine

I got the same error but in a flexcontent.

```
10 = IMAGE
10.file.import = uploads/tx_templavoila/
10.file.import.current = 1
10.file.import.listNum = 0
10.file.width = 90c
10.file.height = 65c
10.altText.stdWrap.field = field_alt
```

It's just like the generated typoscript, for most part.
Can it be an misconfiguration of the server?

It do the error in my default language.

I use TYPO3 4.1.5 with templavoilà 1.3.3

It's really urgent.

- *Status changed from New to Needs Feedback*
- *Target version deleted (0)*

The issue is very old, does this issue exists in newer versions of TYPO3 CMS (4.5 or 6.1)?
