**Description**

I want to create images with GIFBUILDER which don't have a fixed width and height. The XY-property can handle only static values, but i'd like to assign them dynamically. Thus, it would be great to have a stdWrap-functionality on the XY-property.

Example:

```
file = GIFBUILDER
file {
  XY.cObject = USER
  XY.cObject.userFunc = tx_myext_pi1->calculateDimensions
}
```

(issue imported from #M9164)

I just implemented this real simple and useful feature. Please have a look. Thanks!

this is implemented

```
if (isset($this->setup['XY.'])) {
    $this->setup['XY'] = $this->cObj->stdWrap($this->setup['XY'], $this->setup['XY.']);
}
```
