

TYPO3 Core - Bug #19251

"Show content from this page instead" does not work across Domain-Trees in multidomain environment

Description

This is the Pagetree:

```
| Rootpage
+ Domain 1
+ page 1
+ Domain 2
+ page 2
```

Page 2 is configured to "Show content from this page instead" of page 1. This works until a domainrecord is entered in Page Domain1. After that the content of the page remains empty, CONTENT shows NUMROWS = 0.

Work around: insert the Domain Record into "page1" and make page2 the default page for all Domains.

Sorry, probably "Content Rendering" is not the proper Category :(

Anyway: TYPO3 4.2.1, PHP 5.2

#2 - 2008-08-25 13:00 - Lukas Taferner

And sorry again :(

config.content_from_pid_allowOutsideDomain also does the trick.

Please close the issue!

Sorry for the inconvenience!
