Description

Problem: If you want to show links to access restricted pages, be that in bodytext or you might want to inform your users that a login is required by setting an appropriate class and title attribute.

Therefore it would be nice to have special ATagParams at hand for these cases:

For normal links:

```
config.typolinkLinkAccessRestrictedPages.ATagParams
```

For menus

```
[MenuObject].showAccessRestrictedPages.ATagParams
```

this is a nice missing feature!

- Status changed from Accepted to Needs Feedback

As this report is very old, is the handling in newer TYPO3 CMS Versions (like 6.0/6.1) more like you expect it?

#4 - 2013-05-12 14:19 - Simon Schaufelberger

Nothing has changed here. what do you mean with "more like you expect it"? this is still a feature request!

Voting up!

Another use case: client wants to show the access restricted pages in menu, but clicking on them must show login popup, therefore we need to add onclick="displayLoginForm(); return false;" to such links and there is no way to do this. Currently we do it by dirty XCLASSing of \TYPO3\CMS\Frontend\ContentObject\Menu\TextMenuContentObject

Btw, onclick event can be added very easy by following line at the end of \TYPO3\CMS\Frontend\ContentObject\Menu\AbstractMenuContentObject -> changeLinksForAccessRestrictedPages():

```
// add onclick event
$LD['onClick'] = $this->mconf['showAccessRestrictedPages.']['onClick'];
```

And changing this line at \TYPO3\CMS\Frontend\ContentObject\Menu\AbstractMenuContentObject -> link():

```
$list['onClick'] = $onClick;
```

to

```
// add onclick event, if it was supplied
$list['onClick'] = $onClick ?: htmlspecialchars($LD['onClick']);
```
