

## TinyMCE RTE - Bug #1993

### mount pages not possible

2008-11-08 10:48 - Georg Ringer

<b>Status:</b> Closed	<b>Start date:</b> 2008-11-08
<b>Priority:</b> Must have	<b>Due date:</b>

<b>Category:</b>	<b>Estimated time:</b> 0.00 hour
<b>Target version:</b>	
<b>Description</b>	
Have you ever tried setting a mountpage without htmlarea ? there is a blocking error in the popup	
<pre>TYPO3 Fatal Error: Extension key "rtehtmlarea" was NOT loaded! (t3lib_extMgm::extPath)</pre>	
I know it is not an error of your ext.. so i also will report to the rte mailinglist and asking there

I tested by setting a page as mount page and creating Link with RTE to that page - no error.  
Tell exactly in which conditions you get that.

If that is not in normal BE editing situation, this is apparently a problem with some plugin.

#### #2 - 2008-11-10 08:05 - Georg Ringer

This is a problem of DAM which forces to use htmlarea there.

so DAM won't work unless you use htmlarea? (as it uses the dialog from htmlarea?)

do we need to take some action? or is it "solved"?

#### #4 - 2008-11-10 21:52 - Georg Ringer

Hi,

i reported this to Dan who currently is the most active dam dev. Maybe you contact him too or keep your eyes on the thread in the dam mailinglist.

i know rte & dam too less to tell you if you should do anything inside tinyrte, sorry!

Georg, are you sure it's the DAM extension?

I just scanned all of the files in the DAM extension dir, for occurrences of "rtehtmlarea", and found none.

If DAM is used, it doesn't work, if I turn it off, it works.

but I am using DAM from trunk (2-3 weeks old) and not a newer version. If you want an account of my test installation, just write me in private

I just scanned all of the files in the DAM extension dir, for occurrences of "`htmlarea`", and found none.

maybe some dam related other plugin?

- *Status changed from New to Accepted*

bug confirmed;

will only be fixed if sponsored or someone provides a patch.

**#9 - 2009-06-10 21:54 - Marcus Schwemer**

As far as I can see, there is at least a work-around:

- 1) Go to the EM
- 2) Select extension "DAM"
- 3) Disable option "htmlArea RTE integration [`htmlAreaBrowser`]"

With this setting `tinymce_rte` works for me (even with "Mount page"). You have only the normal filebrowser in `tinymce_rte` available, like without DAM.

So it would be fine to have a DAM integration ;-)

**#10 - 2009-07-11 16:55 - Marcus Schwemer**

I would vote for closing this issue.

Having DAM integration is worth another ticket ... ;-)
