#### Description

The method tslib\_fe::checkAlternativeldMethods() in TSFE tries to fetch the server environment PATH\_INFO and if there's something it expects an URL like "/index.php/<page-id>/<type-number>/" and sets the current id and type accordant.

However, if config.simulateStaticDocuments is not set to "PATH\_INFO" this is a false positive.

Since the functionality of simulateStaticDocuments was extracted to the system extension tx\_simulatestatic in TYPO3 4.3, the mentioned part should also be moved to that place.
