Description

Firefox extension Ant.com Toolbar 1.3 modifies the browser useragent string to which it appends "Ant.com Toolbar 1.3".

RTE erroneously identifies the browser as Mozilla version 1.3 for which initialization is different. Initialization then fails to complete.

History

#1 - 2009-03-11 00:57 - Stanislas Rolland

Attached patch fixes the issue.

The problem may also be worked around by going to page

about:config

in Firefox and modifying the value of option

general.useragent.extra.firefox

removing the string added by Ant.com Toolbar.

#2 - 2009-03-11 01:23 - Stanislas Rolland

Committed to SVN TYPO3core trunk (revision 5188) and branch TYPO3_4-2 (revision 5189).

#3 - 2018-10-02 12:27 - Benni Mack

- Status changed from Resolved to Closed
