

TYPO3 Core - Bug #20428

maxWInText setting is never used, because of missing "textPos" TypoScript property

Description

In the work of rearranging the TypoScript of `css_styled_content` (now split up into different versions), a bug was introduced in that the "textPos" property was forgotten.

This setting is used in `css_styled_content`'s PHP code to decide if `maxW` or `maxWInText` is to be used (usually half the width).

To reproduce the problem:

- 1) set the constant to `styles.content.imgtext.maxWInText` to 300 (default)
- 2) insert a content element with images to the "left of text".
- 3) see how they get rendered 600px wide in current trunk

Now apply the patch:

Re-render the page, and now the 300px correct setting is applied to the image.

This is pretty critical as it will break several site layouts.
