Description

currently it is not possible to override the image which is used for imageLinkWrap.

This would be nice to have it for e.g. setting a different image in the popup. New option "file" is introduced

possible TS

```
tt_content.image.20.1.imageLinkWrap.file.override.cObject {
field = tx_alternateimages_image
stdWrap {
required = 1
wrap = uploads/pics/
}
listNum < tt_content.image.20.1.imageLinkWrap.enable.ifEmpty.typolink.parameter.listNum
}
```

(issue imported from #M11229)
