Description

Heya Stan :-)

Even if a class is neither listed under RTE.default.proc.allowedClasses nor under buttons.blockstyle/textstyle.tags.tagname.allowedClasses it survives the way to the database. Can you reproduce this?

And a question: Would it be feasible to get rid of one of those class lists?

Could not perhaps the allowed classes be collected from buttons.blockstyle/textstyle.tags.tagname. Would save a lot of configuration stuff.

Uschi

(issue imported from #M11299)

History

#1 - 2010-06-09 07:58 - Stanislas Rolland

Hey Uschi,

proc.allowedClasses is used by the tranformation on the way to the database and applies only to p (or div) and span tags.

buttons.blockstyle/textstyle.tags.tagname.allowedClasses specifies to the RTE what classes may appear in the style selector box.

Stan

#2 - 2011-08-14 16:39 - Susanne Moog

- Category set to RTE (rtehtmlarea + ckeeditor)

- Target version deleted (0)

- TYPO3 Version set to 4.4

Stan, is here still something to do or can this one be closed?
