Description

Problem:

User X has to DB-mounts

DBM 1

DBM 2

If he/she expands DBM 1 in the pagetree DBM 2 disappears completely. You can only get it back by reloading the tree.

(issue imported from #M11482)

History

#1 - 2009-07-31 15:29 - Nabil Saleh

I tried to reproduce this error:

- 1st. created a testuser with a group that may see/edit all pages
- 2nd. added 2 small trees as dbmounts
- 3rd. su to the user in Firefox expand/reduce works fine on any mount
- 4th. logged in (not su) in IE8 => no problem either

am i missing something?

#2 - 2009-07-31 17:40 - Andreas Wolf

This problem was introduced in revision 5342 - at least that's what a quick hunt with "git bisect" told me. I'll track it further down and provide a patch if possible

#3 - 2009-07-31 18:50 - Andreas Wolf

I attached a patch for the issue. The problem was an unclosed div element with collapsed trees. This made at least Firefox get totally confused because of the messed up DOM structure.

The solution is quite simple: Always close the div element - which is used for styling tree elements - after the elements text. A subtree, if available, is now outside the div, directly underneath the ul - and besides the div.

#4 - 2009-07-31 20:06 - Andreas Wolf

The patch has one small flaw when applied with some patch tools. They don't seem to like the second line, which was added by git. In that case, just remove this line.

#5 - 2009-09-04 19:25 - Steffen Kamper

committed to trunk, rev 5859
