[BUGFIX] Flash uploader doesn't work in Filelist clickmenus

The Flash uploader only works in the click menu of the folder tree in the Filelist module. It doesn't work in

- the click menu of a folder in the "right frame"
- the click menu in a folder (in the right top)

This is because the Flash uploader JS is only observing a click event to a button but cannot be called directly.

History

#1 - 2010-01-06 23:12 - Steffen Gebert

can reproduce this

#2 - 2010-01-06 23:33 - Steffen Gebert

Problem is that `initFlashUploader()` is not defined in global scope, but only in a local, reachable from the upload-button on top of `file_list`. This `initFlashUploader()` also takes event as parameter, not path, so it differs a bit.

#3 - 2011-11-02 00:48 - Lorenz Ulrich

I just solved the related bug for DAM and think that it's not a problem to solve this bug. If you're OK with my approach I will provide patches for the core. Currently we have this JavaScript in the file list:

```
if ($GLOBALS['BE_USER']->uc['enableFlashUploader']) {  
  
    $this->doc->JScodeArray['flashUploader'] = '  
        if (top.TYPO3.FileUploadWindow.isFlashAvailable()) {  
            document.observe("dom:loaded", function() {
```

```

        // monitor the button
        $("button-upload").observe("click", initFlashUploader);
        function initFlashUploader(event) {
            // set the page specific options for the flashUploader
            var flashUploadOptions = {
                uploadURL: top.TS.PATH_typo3 + "ajax.php",
                uploadFileSizeLimit: "' . t3lib_div::getMaxUploadFileSize() . '",
                uploadFileTypes: {
                    allow: "' . $GLOBALS['TYPO3_CONF_VARS']['BE']['fileExtensions']['webpace']['allo
w'] . '",
                    deny: "' . $GLOBALS['TYPO3_CONF_VARS']['BE']['fileExtensions']['webpace']['deny']
. '"
                },
                uploadFilePostName: "upload_1",
                uploadPostParams: {
                    "file[upload][1][target]": "' . $this->id . '",
                    "file[upload][1][data]": 1,
                    "file[upload][1][charset]": "utf-8",
                    "ajaxID": "TYPO3_tcefile::process"
                }
            };

```

```

        // get the flashUploaderWindow instance from the parent frame
        var flashUploader = top.TYPO3.FileUploadWindow.getInstance(flashUploadOptions);
        // add an additional function inside the container to show the checkbox option
        var infoComponent = new top.Ext.Panel({
            autoEl: { tag: "div" },
            height: "auto",
            bodyBorder: false,
            border: false,
            hideBorders: true,
            cls: "t3-upload-window-infopanel",
            id: "t3-upload-window-infopanel-addition",
            html: '\<label for="overrideExistingFilesCheckbox"><input id="overrideExistingFilesChe
ckbox" type="checkbox" onclick="setFlashPostOptionOverwriteExistingFiles(this);" />\' + top.String.format(top.
TYPO3.LLL.fileUpload.infoComponentOverrideFiles) + '\</label>\'
        });
        flashUploader.add(infoComponent);
        // do a reload of this frame once all uploads are done
        flashUploader.on("totalcomplete", function() {
            window.location.reload();
        });

```

```

        // this is the callback function that delivers the additional post parameter to the fl
ash application
        top.setFlashPostOptionOverwriteExistingFiles = function(checkbox) {
            var uploader = top.TYPO3.getInstance("FileUploadWindow");
            if (uploader.isVisible()) {
                uploader.swf.addPostParam("overwriteExistingFiles", (checkbox.checked == true ? 1
: 0));
            }
        };

```

```

        event.stop();
    });
}
';
}

```

This means that the function function `initFlashUploader` is only available if the event was triggered from a click to a ``. We can put this function before event observer and it will also be available for direct calling from the context menu.

As for the event or path thing we can take a switch: If it's just a mouse click the the `<a>`-Tag, we use the target as currently (`$this->id`), if not, we decode the path and use it:

```

var target;
if (typeof(event)=="string") {
    target = decodeURIComponent(event);
    alert(target);
} else {
    target = "' . $this->id . '";
}

```

What do you think?

#4 - 2012-08-02 15:45 - Henrik Ziegenhain

- File flashuploader.png added

I can confirm this issue for at least 4.5.17 and 4.6.10.

There is a folder-Icon in the upper right corner - upload is also not working here

BTW: I never noticed the folder with its context menu :)

#5 - 2013-02-26 14:32 - Gerrit Code Review

- Status changed from Accepted to Under Review

Patch set 1 for branch **master** has been pushed to the review server.
It is available at <https://review.typo3.org/18480>

#6 - 2013-03-23 12:40 - Gerrit Code Review

Patch set 1 for branch **TYPO3_6-0** has been pushed to the review server.
It is available at <https://review.typo3.org/19211>

#7 - 2013-04-12 22:30 - Lorenz Ulrich
