#### Description

Hi,

I discovered a strange issue: the parenttable and parentid field of new IRRE child records stay NULL if the extension date2cal is installed in 4.3.

Solution: mark the extension as conflicting and or remve

Regards,

Lukas Taferner

Hi Lukas,

thanks for your bugreport!

The Core does not check for conflicting extensions.

Instead the extension can set the TYPO3 version it is compatible with.

For date2cal you can put this issue in the bugtracker of this extension which you find here:

<http://forge.typo3.org/projects/extension-date2cal/issues>

##### #2 - 2009-12-05 18:24 - Chris topher

I think the issue now can be closed here;.

The problem should be solved after further discussion with the extension author in the bugtracker linked above.
