Description

After removing (de-installation, not physically deleting) all relevant system extensions (func_wizards, wizard_crpages and wizard_sortpages), the function "Web>Function" shows an empty target page in right frame.

This sounds reasonable, because there are no functions available to show to the end-user, but an empty page/frame is misleading and looks like system fault (may confuse end-user). Please note: the user who sees the empty screen is not reasonable the person who deleted the sysExtensions.

Suggested solution: hide "Function" in "Web>Function" if no functionality is available (best solution) or show warning message - not an empty page (alternative solution).

How to reproduce:

Login -> TYPO3 BE (admin rights).

Admin Tools -> Extension Manager -> Select box: "Install Extension" (display shy extensions: YES)

Section "Backend Modules":

Remove (uninstall) extensions: wizard_crpages, wizard_sortpages and func_wizards (in this order), see attached screenshot008.jpg

Issue: in section "Web", the menu link "Functions" is still available, see attached screenshot009.jpg

Click: "Web>Functions" and select any page in the page tree.

Issue: frame (right hand side) is empty, no message appears, see attached screenshot010.jpg

(issue imported from #M13266)

History

#1 - 2010-01-17 16:36 - Chris topher

This is the same kind of problem as [#21227](#), but here not for a group of modules, but for a single one.

Hiding the module, if it is empty, would be in line with the behaviour after applying [#21227](#). That should be the way to go.

- Status changed from New to Needs Feedback
- Target version deleted (0)

The issue is very old, does this issue exists in newer versions of TYPO3 CMS (4.5 or 6.1)?

#3 - 2013-05-17 10:30 - Michael Schams

Yes, the issue still exists in TYPO3 CMS 6.0.4. Tested with the a fresh Introduction Package.

How to reproduce (same as above, but 6.0 specific):

- admin BE login
- go to Extension Manager
- under "Manage extensions", type "func" (this displays the sysext in question)
- deactivate the extensions listed above (in the correct order)
- go to "Web>Functions" and select any page in the page tree
- you get an empty right content area (which looks like an error)

I just had the chance to test this on a fresh TYPO3 CMS 6.1.0 Introduction Package instance: same issue.
