Description

If a standard-mailform contains several required fields with commas in the label validateForms() in t3lib/jsfunc.validateform.js is not able to process them all or display the correct error-message.
This is due to a change in the FORM method in typo3/sysext/cms/tslib/class.tslib_content.php. Up to and including Version 4.2.9 the parameters ($fieldlist-array) for validateForms() where passed through rawurlencode(), now the raw data is passed, including unencoded commas. validateForms() uses commas to separate the field to check from the field-label to display on error, and does not like unencoded commas in the label.

History

#1 - 2010-05-21 13:14 - Georg Nebel

A possible solution might be to use '|' instead of comma as a separator.

#2 - 2010-07-20 23:55 - Chris topher

Hi Georg,

I just noticed your patch, because I read the Bugs-Newsgroup.
That was just luck.

When you have a patch for an issue, you should instead post it as an RFC to Core List. Then it will be integrated in the next releases.
Check http://typo3.org/teams/core/core-mailinglist-rules

Hi Christopher,
Thanks for the info.

Patch posted as RFC.

#4 - 2011-08-14 15:13 - Susanne Moog

- Status changed from Needs Feedback to Accepted

- Target version deleted (0)

- TYPO3 Version set to 4.4

#5 - 2013-04-09 12:46 - Maik Matthias

This bug still exists in Version 4.5.x and is very annoying.

#6 - 2015-01-15 11:26 - Mathias Schreiber

- Status changed from Accepted to Closed

- Is Regression set to No
