Description

If we don't have any sys_domain record in our page tree, the clickmenu "Show" will generate a link like:

<http://example.com//index.php?id=xx>

Note the double "/" before index.php. This won't work if you have realurl installed (it doesn't even need to be enabled for your site):

"Error!

Reason: "index.php" could not be found, closest page matching is

"

(issue imported from #M13740)
