Description

The "Check for extension updates" in the Extension Manager does not always find the latest version due to a bad expectation of the sort order.

In `SC_mod_tools_em_index->showExtensionsToUpdate()` we get a list of versions for a particular extension and the latest version is assumed to be the last entry in the versions array. This array is not necessarily sorted by version number however, so a simple `natsort()` will make sure that it is.

To duplicate the issue, ensure that you're on a TemplaVoila version prior to the 1.4.2 release. When you "Check for extension updates", you'll see 1.4.1 as the latest version. Searching for `templavoila` from the "Import extensions" submodule will reveal 1.4.2 however.

(issue imported from #M14003)
