Description

We already have a hook at the top of `t3lib_tstemplate->includeStaticTypoScriptSources()` for including the old static templates. For other extensions such as `templavoila_framework`, it would be helpful to have an identical hook at the end of this method.

Placing the hook at the end allows skins in the `templavoila_framework` to manipulate TypoScript settings from extensions on a per skin basis. This is useful, for example, when a skin needs to override the default rendering of a content element as defined in CSS Styled Content.
