Description

migrating 4.3 to 4.4 t3lib_utility_Mail::mail does not work properly.

in install tool you will be told, Mail was sent to: xxx
but it was not -
in class.t3lib_utility_mail.php sysLog() vars are not proper named,
\$additionalParameters disable propper sending.
without \$additionalParameters it will works.

I'm sure in 4.3 it worked fine.
Sendmail program not found or not executable? is shown
safe_mode = on

mail() works

(issue imported from #M15052)

History

#1 - 2010-07-12 19:47 - Bernd Hanisch

the problem seems, that the new function didn't check the php_safe variable. i imported the code from 4.3.3 as below:

```
-----row: 32 -----  
// If safe mode is on, the fifth parameter to mail is not allowed, so the fix wont work on unix with safe_mode=On  
if(!ini_get("safe_mode") && $additionalParameters) {  
$success = @mail($to, $subject, $messageBody, $additionalHeaders, $additionalParameters);  
} else {  
$success = @mail($to, $subject, $messageBody, $additionalHeaders);  
}  
-----
```

#2 - 2010-07-14 08:58 - Steffen Gebert

Could you have a look at the SVN history, when this was changed and maybe find a reason?

If it was forgotten, would you be so kind and send the patch as RFC to the Core list?

#3 - 2013-10-21 09:51 - Alexander Opitz

- Status changed from New to Needs Feedback
- Target version deleted (0)
- Is Regression set to No

Hi,

as this issue is very old. Does the problem still exists within newer versions of TYPO3 CMS (4.5 or 6.1)?

#4 - 2014-02-20 17:02 - Alexander Opitz

- Status changed from Needs Feedback to Closed

No feedback within the last 90 days => closing this ticket.

If you think that this is the wrong decision or experience this issue again, then please write to the mailing list typo3.teams.bugs with issue number and an explanation or open a new ticket and add a relation to this ticket number.
