Description	
Switching to sprites leads to quite a few new validation warnings.	
Simple reason: protected static function buildSpriteHtmlIconTag(array \$tagAttributes, \$innerHtml = ' ', \$tagName = 'span') {}	
Default should be but in the previous call of getSpritelcon() \$innerHtml is set to "": \$innerHtml = (isset(\$options['html']) ? \$options['html'] : "");	
Therefore an additional check should be made.
