Description	
<pre>// strip everything non-ascii \$meaningfulPrefix = preg_replace('/[^A-Za-z0-9_-]/', '', trim(\$meaningfulPrefix));</pre>	
This is how special characters are simply stripped out. The should be converted using <code>t3lib_cs->specCharsToASCII()</code>	
I also had an issue with Images that were not showing up in FE, when they had Umlauts in the title. I could not perfectly reproduce and investigate this issue, however it is completely gone when I switched to <code>t3lib_cs->specCharsToASCII()</code> (issue imported from #M15466)
