Description

We have a special Usermanagement which runs under <https://>

Example given: [https://example.com?id=123&tx_extkey_pi1\[value\]=1](https://example.com?id=123&tx_extkey_pi1[value]=1) BaseURL is also `https://`

We use piBase and generate Links with `$this->pi_linkTP_keepPIvars_URL` All Links are generate with [http:// scheme](http://scheme).

It was nice if we had a new option that the page is generated over `https`. Maybe automatically?

`$this->pi_linkTP_keepPIvars_URL` is filled by `$this->cObj->typolink()` A new parameter in Typolink function (Scheme?) could be useful

(issue imported from #M15795)

Hi,

as this issue is very old. Does the problem still exists within newer versions of TYPO3 CMS (4.5 or 6.1)?

#2 - 2013-11-12 11:32 - Guido S.

Problem doesnt exist anymore :-)
