

## TYPO3 Core - Bug #23705

### sections in flexform check access to language 0 even if record is in another language

2010-10-11 13:53 - Andreas Kiessling

#### Description

This problem may be best seen in action with templavoila, but it is caused by the core handling of sections in flexforms.

When a section is defined in a flexform, the function `getSingleField_typeFlex_draw` in class `t3lib_TCEforms` checks if the user has access to the default language. This check is even done, when the record is totally unrelated to the default language, e.g. when you have a localized copy of an fce or a flexform in a simple extension record.

When a user has no access to the default language, he can not create a new entry in the section, but only edit the already existing.

The check should be changed if the user can edit the language of the current record, but probably only if the flexform is configured with `langDisable = 1`

(issue imported from #M15958)

#### History

##### #1 - 2010-10-11 15:13 - Andreas Kiessling

See attached patch.

`langDisable` can probably be ignored, because a new section is always independant of other languages

##### #2 - 2011-01-10 12:03 - Andreas Kiessling

Attached v5.

Please test and vote in core list.

##### #3 - 2014-06-16 09:17 - Alexander Opitz

- Status changed from *New* to *Needs Feedback*

- Target version deleted (0)

- Is Regression set to *No*

Hi Andreas,

as this issue is very old. Does the problem still exists within newer versions of TYPO3 CMS (6.2.3)?

##### #4 - 2014-08-18 11:48 - Lukas Taferner

Issue still exists in 4.5.34 and is very annoying. Patch works!

##### #5 - 2014-12-15 10:56 - Alexander Opitz

- Status changed from *Needs Feedback* to *New*

Issue exists in 6.2.

Can you update your patch?

##### #6 - 2017-04-03 23:07 - Christian Kuhn

- Status changed from *New* to *Closed*

the multi-lang feature with disableChildren=1 and friends has been dropped from core.

#### #7 - 2017-04-03 23:16 - Andreas Kiessling

disableChildren and friends has nothing to do with that issue

The access check for lang 0 is still there:

<https://github.com/TYPO3/TYPO3.CMS/blob/38a1bc5dd7990b63e45c0419065cd02fe91187e9/typo3/sysext/backend/Classes/Form/Container/FlexFormSectionContainer.php#L50>

So you can't restructure sections or add new elements without access to language 0. IMHO this is a bug or should be at least configurable.
