

TYPO3 Core - Bug #24056

innerWrap2 only working if innerWrap exists

2010-11-15 10:11 - Tim Klein-Hitpaß

Description

In the 4.4.4 Version following TS code did work (rendered a correct content) in all cases:

```
stdWrap {
wrap = |

innerWrap = &lt;span&gt;|&lt;/span&gt;
    innerWrap.if {
        isTrue.field = tx_pagesettings_offerimage
        negate = 1
    }

innerWrap2 = &lt;span&gt;|&lt;/span&gt;
    innerWrap2.dataWrap = &lt;img src="{field:tx_pagesettings_offerimage}" alt="" /&gt;
;|
    innerWrap2.if {
        isFalse.field = tx_aldpagesettings_offerimage
        negate = 1
    }
}
```

When testing with 4.5.0-alpha3 the innerWrap2 was not rendered in the output.

I tried several ways to get it work again and it seems that innerWrap2 only "works" when a innerWrap is rendered. after changing the TS to:

```
stdWrap {
wrap = |

innerWrap = &lt;span&gt;|&lt;/span&gt;

innerWrap2 = |
    innerWrap2.dataWrap = &lt;img src="{field:tx_aldpagesettings_offerimage}" alt="" /
&gt;|
    innerWrap2.if {
        isFalse.field = tx_pagesettings_offerimage
        negate = 1
    }
}
```

the innerWrap2 was rendered again.

I think the always defined innerWrap in the second TS-code is the reason for the correct rendering of innerWrap2.

I did not try Version 4.5.0-alpha1 or 4.5.0-alpha2.
(issue imported from #M16391)

Well - it seems you are on the wrong track. ;-)

The real problem can be found at [#16110](#) and is fixed in current trunk.

#2 - 2010-11-15 18:32 - Ernesto Baschny

Fixed already with [#16110](#) in 4.5 beta1. Thanks!
