Description

This has already been reported here:

<http://forge.typo3.org/issues/12455>

Moving the discussion to mantis to have all things in one place.

Original Description:

When trying to save the modified configuration of an extension, I get a message "Saving settings.." and eventually a flash message saying "Configuration was saved". Then pops up a Windows download dialogue about ajax.php.

The configuration changes were NOT saved.

The Backend log says: "Core: Error handler (BE): PHP Warning: array_pop() [

(issue imported from #M17315)

Additional note by Stan:

Hi Steffen,

I am trying to update the configuration of rtehtmlarea.

Posted request:

```
extTID=6&extAction=ExtDirect&extMethod=saveExtensionConfiguration&extType=rpc&extUpload=false&extkey=rtehtmlarea&exttype=S&securityToken=e8bbda1670b9f2bed209fa0d6476b822&
```

```
Reply: [{"tid":"6","action":"ExtDirect","method":"saveExtensionConfiguration","type":"rpc","result":{"success":true,"data":null,"debug":""}]
```

Another note from Phil:

Hello Helmut,

it is indeed a browser issue. The error happens with Opera (11).

However Chromium (10) works like it should.

Both on Fedora (64bit).

Best regards

Phil

Does not work in Firefox 4 beta 9.

Works fine in Firefox 3.6.13 and Chrome 8.0.552.

In Opera 11.0, the update is succesful, but I do get the request to download ajax.php and the error on the log.

In IE8, the configuration tab does not display. Fails with unknown runtime error in ext-all.

#4 - 2011-01-26 10:43 - Steffen Gebert

So isn't this one solved with [#24819](#)?

#5 - 2011-01-26 10:48 - Helmut Hummel

It's partly solved. There are still some troubles in FF4 and Opera10

#6 - 2011-03-04 10:02 - Helmut Hummel

This had nothing to do with CSRF protection and is now solved in 4.5.2
