Description

Due to a bug in the AOP Proxy Class Builder methods of the target class which have been inherited from a parent class but haven't been overridden by the target class are not advised. The problem is caused by using `get_class_methods()` instead of the corresponding `ReflectionClass` method. `get_class_methods()` only returns the names of methods which are declared directly in the given class while `$class->getMethods()` also returns those methods which were declared in a parent class.

[BUGFIX] Inherited methods cannot be advised

This solves a bug in the AOP Proxy Class Builder which resulted in methods which have been inherited by a parent class but which not have been overridden by the child class could not be advised.
