### Description

Currently the canProcessRequest() method only checks if the class name of the request 100% matches the class names specified in $this->supportedRequestTypes. Therefore sub classes of these (like mock web requests) are not accepted.

## Associated revisions

### Revision 095abbb8 - 2009-02-09 16:01 - Robert Lemke

Known issue in this commit: the TYPO3 backend and TYPO3CR backend don't work at the moment because the REST controller is not fully functional.

- FLOW3: (MVC) The canProcessRequest() method in the AbstractController now also accepts sub classes of the supported request types. Fixes #2601
- FLOW3: (MVC) Refactored parts of the ActionController. Also changed the order in which certain methods are called. The order is now: resolveActionMethodName(), initializeArguments(), mapRequestArgumentsToLocalArguments(), initializeView(), initializeAction(), callActionMethod(). Also resolves #2580.
- FLOW3: (MVC) Fixed parts of the RESTController. Note: the show, delete and update actions currently don't work due to a new way of handling ids. I'm working on it ...
- FLOW3: (MVC) Wrote proper tests for the REST controller. There are still missing tests for resolveActionMethodName() method.

### Revision 1884 - 2009-02-09 16:01 - Robert Lemke
