**Description**

It's not really a bug, but a little tweak for the ActionController...

What about making the following function *final*? Than it cannot be overwritten...

```
@/** * Implementation of the arguments initialization in the action controller: * Automatically registers arguments of the current action
* * Don't override this method - use initializeArguments() instead. * * @return void * @author Robert Lemke <robert@typo3.org> *
@see initializeArguments() * @internal
*/
protected function initializeActionMethodArguments() {

}

```

### History

#### #1 - 2009-02-13 11:02 - Robert Lemke

- Status changed from New to Rejected
- Assignee set to Robert Lemke

We can't mark the method as final or private because then we won't be able to unit test it.

#### #2 - 2009-02-13 21:12 - Malte Jansen

Ok, I didn't know that...
