Description

Using T3 4.5.2 and no templavoila, i have the problem that the preview icon link is not correct.
I am in my workspace and in page module. I switch to another language via the dropdown in the top toolbar.

My link looks like this:

```
http://example.com/typo3/mod.php?id=14
&tx_workspaces_web_workspacesworkspaces[action]=index
&tx_workspaces_web_workspacesworkspaces[controller]=Tx_Workspaces_Controller_PreviewController
&tx_workspaces_web_workspacesworkspaces[controller]=Preview
&M=web_WorkspacesWorkspaces
&id=14
```

Well, id is included twice but no L parameter. SOMEHOW this works with templavoila, i have no idea why...

Revision 1f91a3d3 - 2013-01-04 09:00 - Oliver Hader

[BUGFIX] Preview does not include L parameter on localization

The workspace module offers a way to preview accordant records
in the frontend. However, the L parameters is missing if dealing
with localized records.

The language needs to be determined from the version record, not
from the live record (which might be a placeholder as well).
Besides that, the L parameter needs to be provided as additional
GET parameter since it cannot be determined anymore later during
processing in t3lib_BEfunc::viewOnClick().

code-path for further investigations:
Classes/Service/Workspaces.php, generateWorkspaceSplittedPreviewLink()
which calls the UriBuilder from Extbase:
Classes/MVC/Web/Routing/UriBuilder.php

It seems that the UriBuilder already generates the id=... at beginning of this link and we could avoid adding it later. Also the controller-parameter is generated in the first place and then manually added again (second parameter, probably overwriting the first one) in the URL mentioned.

The language-parameter is added in
t3lib/class.t3lib_befunc.php, viewOnClick()
But for some reason it doesn't add the L-parameter there ...

The $viewScript-parameter itself is created in the preProcess-hook called from viewOnClick() and implemented in the workspace-package.
