Some behaviors that I would expect from this feature:
given:

```
$this->view->assign('someString', 'foo');
```

satisfied conditions (true)

```
<f:if condition="{someString} == foo">
<f:if condition="foo == {someString}">
<f:if condition="{someString}  ==  foo">
<f:if condition="{someString} != bar"> (other comparators should behave like their PHP dependant)
{f:if (condition: '{someString} == foo')}
```

unsatisfied conditions (false)

```
<f:if condition="{someString} == bar">
<f:if condition="bar == {someString}">
<f:if condition="someString == foo"> (or should this throw an exception?)
```

parser exception

```
<f:if condition="{someString} == foo bar"> (not sure, whether strings containing spaces should be supported)
<f:if condition="{someString} == foo != bar"> (more than one comparator)
{f:if (condition: someString == foo)} (not sure, if it is easily possible to detect this case)
```
