Description

I'm dreaming of having a more intuitive way of defining default object-controller routes like this:

```
-
name: 'Ticket'
uriPattern: 'tickets/{ticket}({@format})'
defaults:
  @package:   Guruhelp
  @controller: Ticket
  @action:    show
  @format:    html
routeParts:
  ticket:
    handler: F3\Guruhelp\Routing\TicketRoutePartHandler
```

Should look like this:

```
-
name: 'Ticket'
uriPattern: 'tickets/{ticket}({@format})'
defaults:
  @package:   Guruhelp
  @controller: Ticket
  @action:    show
  @format:    html
```

And the route configuration should autodetect what identifier to use (uuid or autoincrement integer values, depending on the model-aspect-definition) for resolving the object. Routes like tickets/9fadfc1e-c268-40f1-8190-547448d0d4b8.xml should work "out-of-the-box".

Today I have to use such an ugly route:

```
-
name: 'Ticket detail'
uriPattern: 'tickets/show({@format})'
defaults:
  @package:   Guruhelp
  @controller: Ticket
  @action:    show
  @format:    html
```

..that resolves in something like this: tickets/show?ticket[__identity]=5f1e5e06-2430-45be-addf-4b5236d27229

Thanks for reporting Martin, but there is a ticket for that already. I'll close this one to avoid confusion.
And, promised, magic object routes will come very soon! ;)
