Description

Add support for argument modifiers in pointcut expressions: It should be possible to narrow down the set of joinpoints by specifying parameters and what value they should have in the definition of a pointcut

Associated revisions

Revision 151 - 2007-02-28 13:01 - Robert Lemke

- Core: Tried implementing a method arguments pointcut filter but realized that it would make the whole pointcut filtering too complex. Dropped the idea - just use an around advice instead which checks for parameters itself. Closes #28 * Core: Improved arguments handling for Join Points - now the names of the parameters are available * Core: Added parser support for Components.conf option "autoWiringMode" and fixed Auto Wiring support in general.
