Description

It's time for some cleanup. Clean phpDoc comments are important to make the API understandable to Users and IDEs. I think t3lib_div is a good point to start with.

Here is what I intent to do with this RFC:

```
* @param string Number of hex charactres to return
```

- Provide the variable name in the @param line (complies CGL)
- Unify whitespaces between @-command, datatype, varname and description (a single space between each of them, complies CGL)
- Correct wrong datatype declarations where it makes sense
- Correct spelling issues where I stumble over them

```
* @param integer $count Number of hex characters to return
```

I already got the patch, I'll submit it shortly.

[TASK] Clean up phpDoc comments in t3lib_div

Clean phpDoc comments are important to make the API understandable to users and IDEs. t3lib_div is a good point to start with.

Lots of comment changes to comply with CGL especially:

- Provide the variable name in the @param line
- Unify white spaces between @-command, datatype, varname and description
- Correct wrong datatype declarations (default 0/1 to TRUE/FALSE for booleans)
- Add some missing / incomplete phpDoc comments
- Correct some spelling issues
