<b>Target version:</b>	1.0 beta 1	<b>Has patch:</b>	
<b>Sprint:</b>		<b>Complexity:</b>	
<b>PHP Version:</b>			

#### Description

With the introduction of vendor namespaces support the directory structure has become quite deep:

Package "RobertLemke.Foo.Bar" would reside in:  
Packages/Application/RobertLemke/Foo/Bar/Classes/...

As discussed during T3DD11 we'd rather have a more shallow directory structure which also simplifies cloning a package from git:  
Packages/Application/RobertLemke.Foo.Bar/Classes/...

[TASK][!!!] Shallow directory structure for packages

This introduces a more shallow directory structure for packages. Instead of having a corresponding directory for each PHP namespace segment, the package key (e.g. "TYPO3.Kickstart") is now used as the directory name, resulting in paths like  
Packages/Application/TYPO3.Kickstart/Classes/Controller/...

Note that you will need to update the distribution as well to let it point to the correct submodule paths.
