Description			
<p>Since 4.5 we have stdWrap functions available to be chained with other stdWrap functions. So we can do something like</p> <pre>10 = TEXT 10.value = 10*20 10.prioriCalc = 1 10.prioriCalc.if.isTrue.field = doCalculation</pre> <p>Unfortunately this doesn't work for boolean functions like prioriCalc, since they don't set the corresponding "isExecuted" key when their result was false in the first run. This is why the function will be called twice, while having the value set to "Array" in the second run, which will always return something else than false.</p> <p>Therefor we need an additional "else if" to check for this special case and set the key to avoid the second function call.</p> <p>I can't push to GIT currently, so attached you find a patch that solves this problem.</p>

Revision 7fd9bfc5 - 2011-07-24 12:19 - Stefan Neufeind

[BUGFIX] Chained stdWrap is broken for boolean stdWrap function types

isExecuted was not correctly set and so stdWrap was actually called twice.

Thanks to Jo Hasenau.
