### Description

Step1: I enter a searchterm in the pagetree filter, The resulting page is opened
Step2: I open each of the subpages with the arrow-icon
Step3: Some of the subpages work in opening. Some of the subpages can't be opened, althogh subpages are available

See attached Screenshots, they explain the problem best

I can't see any reasonable connection wich subpages are openable and which are not

## History

### #1 - 2011-08-22 14:16 - Florian Bachmann

I don't see a relation to the other two bugs.
Are you sure this is a related problem?
I don't see any warning, and the pagetree stays fully operable, except the stated bug.

Workspaces aren't enabled on that site

*- File pages.sql_1_.zip added*

To make it easy, to reproduce the bug, I made a script-generated similar page-tree.
It contains of a Tree, leading to a zip-code, with stores appended to a zip.

To reproduce the bug
- install a completely fresh 4.5
- only import the pages-table-dump
- enter e.g. "807" to the filter-input field
- open nodes up to "80792" and try to open store8333
=> No child nodes are visible in the tree, although there should be

Please undo the related connection

Hmm, Florian Kuss, would it be possible for you to try to debug the issue?

The classes responsible for the tree display are located in t3lib/tree/.

Could you count how many pages are shown when using the filter? I'm wildly guessing that there is a limit somewhere.

Hi. Could you tell us if this issue still occurs in TYPO3 v.9? How could we reproduce it? Thank you!

*- Status changed from Needs Feedback to Closed*

I think I can safely close this one for now- there has been no answer 6 (!) years ago and no significant advancement...

If you think that this is the wrong decision or experience the issue again please reopen it or open a new issue with a reference to this one. Thank you.
