

TYPO3.Flow - Bug #29979

PersistenceManager::getIdentifierByObject() only returns first Id property

2011-09-18 16:02 - Bastian Waidelich

Has patch:	No		

Description

The doc comment for `\TYPO3\FLOW3\Persistence\PersistenceManagerInterface::getIdentifierByObject()` says, that the return type is "mixed".

Usually that is the UUID of the object (string).

If the object has an `@Id` property, that will be returned instead.

In case the object has multiple `@Id` properties, only the first of those is returned.

Example:

Mode:

```
class ObjectPathMapping {  
  
    /**  
     * @var string  
     * @Id  
     */  
    protected $objectType;  
  
    /**  
     * @var string  
     * @Id  
     */  
    protected $uriPattern;  
  
    /**  
     * @var string  
     * @Id  
     */  
    protected $pathSegment;  
    [...]  
}
```

Now, only the value of `$objectType` would be returned. Instead I'd expect an array that contains the Id properties - or a serialized representation!?

History

BTW: It would make our life easier, if the return type would be fixed (e.g. string)

#3 - 2012-03-14 15:58 - Gerrit Code Review

- Status changed from New to Under Review

Patch set 1 for branch **master** has been pushed to the review server.

It is available at <http://review.typo3.org/9650>

#4 - 2012-05-08 18:26 - Robert Lemke

- Status changed from Under Review to Needs Feedback

- *Has patch set to No*

#5 - 2014-05-14 16:57 - Bastian Waidelich

- *Status changed from Needs Feedback to Closed*

The related review has been abandoned. Closing until this has a valid use case
